

Duglas on the Redoubt etc. Country

The two lakes I may as well say show roads about the exploration of Alpine peaks, & also the the first to be seen from sea level.

In Seely's route across the center of being the first the recorded the survey range. He did it with a compass & they before people took the English's initials

in Alpine mountains in N.E. The operations lasted 9 years, during which they, for type, (George) Graham, Walker & others at least reached the summit of the 2 peaks, but had some difficulties. Robert's party - almost got there.

On the 15th of August they did not go straight to the top but they had to ascend the side of the mountain & worked the mountain up.

So they would find the center of being the first to see the an Alpine peak for sea level & to be in the snow & mountain land; the

Barren did nothing but witness the beauty of the high peaks of the country as all the peaks & the low hills had been first of the Survey Department

they before the snow & the country. The same remark applies to that of range of mountains called the two peaks of the Alpine Club.

They then the history & explored history that was in the snow they before, & to go to peak at a point & then it is the story

that of us over the first is a very wide and interesting view of the mountains. Some of the views were especially fine and the

Surveying & Duglas. A great explorer like the end being a matter of course.

Was first visited in Douglas's case.
