ANILINE DYES.—“I shall commence my observations on Dyeing, by referring especially to the remarkable and beautiful colours derived from Coal Tar, the introduction of which into this art, may be said to constitute the chief distinction as far as Dyeing is concerned, between the present and the former Exhibition, creating in fact, a new era in the tinctorial art. Coal tar colours deserve attention for their power, as well as for the facility with which they may be applied, for one grain will deeply tint half a gallon of water, and little or no skill is required for their application.”—*Vide* Report by GRACE CALVERT, ESQ., F.R.S., PH. D., Honorary Professor of Chemistry.
